| SUBSURFACE SEWAGE TREA | ATMENT SYSTEM | I (SSTS) COMPLIANCE REPORT | | |
| Date: September 12, 2018 | Time: 9:30 AM | Owner: Dan Potter | | |
| Inspection Address: 8220 105 th St, Grant, MN 55115 | | | | |

REPORT SUMMARY

I have performed an "MPCA Compliance Inspection" on this system and have reviewed the original design/permit records, along with a previous compliance inspection from 2002 & 2004, which were on file at Washington County. This very old system (installed in 1982) consists of a pre-cast septic tank and a rock trench drainfield. It should be noted that the average life expectancy of a septic system is approximately 30 years.

Although not a compliance inspection, my inspection indicated that the distribution box was full of solids. The solids should be removed from the box as soon as possible.

Predicated on my inspection of the system and my review of the records, it is my opinion that this system <u>presently meets</u> MPCA minimum compliance inspection requirements.

Inspect Minnesota and Midwest Soil Testing have been hired to perform a compliance inspection of this SSTS for compliance with local ordinances pursuant to Minn. Stat. § 115.55 (2013). This compliance inspection covers only the criteria required by Minn. Stat. § 115.55 Subd. 5a (2013) and Minn. R. 7080.1500 (2011). A compliance inspection is an indication of the current compliance status of the system and does not guarantee the performance or longevity of this system beyond the date of inspection, as it is impossible to determine the future performance of any system. Inspect Minnesota and Midwest Soil Testing disclaim any use of this compliance inspection beyond determining SSTS compliance pursuant to Minn. Stat. § 115.55 Subd. 5a (2013) and Minn. R. 7080.1500 (2011).

Please contact me should you have any questions.

Comments or recommendations:

Although not a compliance inspection, my inspection indicated that the distribution box was full of solids. The solids should be removed from the box as soon as possible.

Certification

I hereby certify that all the necessary information has been gathered to determine the compliance status of this system. No determination of future system performance has been nor can be made due to unknown conditions during system construction, possible abuse of the system, inadequate maintenance, or future water usage.

1. Impact on Public Health – Compliance component #1 of 5

| Compliance criteria: | | Verification method(s): |
|---|------------|--|
| System discharge sewage to the ground surface. | 🗌 Yes 🖾 No | Searched for surface outlet Searched for seeping in yard/backup in home |
| System discharge sewage to drain tile or surface waters. | 🗌 Yes 🖾 No | Excessive ponding in soil system/D-boxes Homeowner testimony (See Comments/Explanation) |
| System cause sewage backup into dwelling or establishment. | 🗌 Yes 🖾 No | Black soil" above soil dispersal system System requires "emergency" pumping Performed dye test |
| Any "yes" answer above indicate an Imminent Threat to Public Hea | | Unable to verify (See Comments/Explanation) Other methods not listed (See Comments/Explanation) |

Comments/Explanation:

Although not a compliance inspection, my inspection indicated that the distribution box was full of solids. The solids should be removed from the box as soon as possible.

2. Tank Integrity - Compliance component #2 of 5

| Compliance criteria: | | Verification method(s): |
|---|------------|---|
| System consists of a seepage pit, | 🗌 Yes 🖾 No | Probed tank(s) bottom |
| cesspool, drywell, or leaching pit. | | Examined construction records |
| Seepage pits meeting 7080.2550 may be | | Examined Tank Integrity Form (Attach) |
| compliant if allowed in local ordinance. | | Observed liquid level below operating depth |
| Sewage tank(s) leak below their designed operating depth. | 🗌 Yes 🖾 No | Examined empty (pumped) tanks(s) |
| If yes, which sewage tank(s) leaks: | | Probed outside tank(s) for "black soil" |
| | | Unable to verify (See Comments/Explanation) |
| Any "yes" answer above indicates the system is Failing to Protect Groundwater. | | Other methods not listed (See Comments/Explanation) |

Comments/Explanation:

Lowered underwater camera into tank - baffles and tank walls OK.

3. Other Compliance Conditions – Compliance component #3 of 5

| a. | Maintenance hole covers are damaged, cracked, unsecured, or appear to structurally unsound. | □ Yes* | 🖾 No | Unknown |
|----|---|--------|------|---------|
| ч. | maintenance note cevere are damaged, eracited, en appear te eractarany anecarta. | | | |

b. Other issues (electrical hazards, etc.) to immediately and adversely impact public health or safety. \Box Yes* \boxtimes No \Box Unknown *System is an imminent threat to public health and safety

Explain:

c. System is non-protective of ground water for other conditions as determined by inspector ☐ Yes* ⊠ No *System is failing to protect groundwater

Explain:

4. Soil Separation – Compliance component #4 of 5

| Date of installation: 1982 | Unknown | Verification method(s): | |
|---|--|--|---|
| Shoreland/Wellhead protection/Food Beverage Lodging? Compliance criteria: | 🛛 Yes 🗌 No | Soil observation does not expire. Previous soil observations by two independent parties are sufl unless site conditions have been altered or local | |
| For systems built prior to April 1, 1996, and not located in Shoreland or Wellhead Protection Area or not serving a food, beverage or lodging establishment: Drainfield has at least a two-foot vertical separation distance from periodically saturated soil or bedrock. | ☐ Yes ☐ No | requirements differ. Conducted soil observation(s) (A Two previous verifications (Attact Not applicable (Holding tank(s), no Unable to verify (See Comments/Explanation) Other (See Comments/Explanation) | h boring logs) drainfield) Explanation) |
| Non-performance systems built April 1, 1996, or later or for non-performance systems located in Shoreland or Wellhead Protection Areas or serving a food, beverage, or lodging establishment: Drainfield has a three-foot vertical separation distance from periodically saturated soil or bedrock.* | ⊠ Yes 🔲 No | Comments/Explanation: Reviewed previous compliance inspe Reviewed previous compliance inpse Reviewed design and permit records | ection from 2004 |
| "Experimental", "Other", or "Performance" | □ Yes □ No | Indicate depths of elevations | |
| systems built under pre-2008 Rules; Type IV or V systems built under 2008 Rules (7080. 2350 or 7080.2400 (Advanced Inspector License required) | IV | A. Bottom of distribution media | See Attached Boring Log(s) |
| Drainfield meets the designed vertical separation distance from periodically saturated soil or bedrock. | | B. Periodically saturated soil/bedrock C. System separation | |
| Anv "no" answer above indicates t | Any "no" answer above indicates the system is | | allowed by Least |
| Failing to Protect Groundwater. | *May be reduced up to 15 percent if Ordinance. | allowed by LOCA | |

5. Operating Permit and Nitrogen BMP* – Compliance component #5 of 5 Kot applicable

| Is the system operated under an Operating Permit? | 🗌 Yes 🛛 No | If "yes", A below is required |
|---|------------|-------------------------------|
| Is the system required to employ a Nitrogen BMP? | 🗌 Yes 🛛 No | If "yes", B below is required |

BMP=Best Management Practice(s) specified in the system design

If the answer to both questions is "no", this section does not need to be completed.

Compliance criteria

| a. | Operating Permit number: Have the Operating Permit requirements been met? | 🗌 Yes 🗌 No |
|----|--|------------|
| b. | Is the required nitrogen BMP in place and properly functioning? | ☐ Yes ☐ No |

Any "no" answer indicates Noncompliance.

Upgrade Requirements (*Minn. Stat.* § 115.55) *An imminent threat to public health and safety (ITPHS) must be upgraded, replaced, or its use discontinued within ten months of receipt of this notice or within a shorter period if required by local ordinance. If the system is failing to protect ground water, the system must be upgraded, replaced, or its use discontinued within the time required by local ordinance. If an existing system is not failing as defined in law, and has at least two feet of design soil separation, then the system need not be upgraded, replaced, or its use discontinued, notwithstanding any local ordinance that is more strict. This provision does not apply to systems in shoreland areas, Wellhead Protection Areas, or those used in connection with food, beverage, and lodging establishments as defined in law.*

Inspect Minnesota & Midwest Soil Testing Subsurface Sewage Treatment System Owner/Property Information

DISCLAIMER

Brian L. Humpal, Inc. dba. Inspect Minnesota, Midwest Soil Testing

Relative to Subsurface Sewage Treatment System (SSTS) Compliance Inspections

- 1. This inspection/report is being performed for only the seller/owner of the property on which the SSTS is located. In such case that another party is paying for the inspection, the contract is between only said party and Brian L. Humpal, Inc.; there is no contract between Brian L. Humpal, Inc. and any other party unless otherwise noted.
- 3. Brian L. Humpal, Inc. has not been retained to warranty, guarantee, or certify the proper functioning of the SSTS for any period of time beyond the date of inspection or into the future. Because of the numerous factors (usage, maintenance, soil characteristics, previous failures, etc.) which may affect the proper operation of an SSTS, as well as the inability of Brian L. Humpal, Inc. to supervise or monitor the use or maintenance of the SSTS, the report shall not be construed as a warranty by Brian L. Humpal, Inc. that the SSTS will function properly for any particular party for any period of time.
- 4. Brian L. Humpal, Inc. is unable to verify the frequency and/or, quality of prior or future maintenance of the SSTS. Maintenance of the tank(s) must be performed through the tanks maintenance hole. The removal of solids from any location other than the maintenance hole is not a compliant method of maintenance. It is strongly recommended that maintenance covers be made accessible to the ground surface to facilitate proper maintenance.
- 5. Minimum Compliance Inspection requirements relative to this inspection and this report include <u>only</u> verification that the SSTS has tank(s) (septic tanks, lift tanks, dosing tanks, stilling tanks, etc.) which are watertight below the designed operating depth, the required separation between the bottom of the subsurface soil distribution medium and seasonally saturated soils, no back-ups of sewage into the dwelling, no discharge of sewage/effluent to the ground surface or surface waters, and no imminent safety hazards. Brian L. Humpal, Inc. does not inspect plumbing or pumps prior to the first SSTS component as these are plumbing components. The performance of exterior pumps and associated components are not inspected as they are considered to be maintenance items. Additionally, no indications relative to compliance with electrical code requirements have been made. It is recommended that any other applicable plumbing, electrical, housing, etc. inspections be performed by a qualified inspection business. Sewage back-up verification is limited to observing the floor drain area and/or the information supplied by the last occupants of the building prior to inspection. Brian L. Humpal, Inc. cannot guarantee that the information given to them by the last occupants of the building prior to inspection relative to back-ups is accurate.
- 4. Certification of this SSTS does not warranty future use beyond the date of the inspection. Any SSTS, old or new, can become hydraulically overloaded or discharge sewage/effluent to the ground surface as a result of more people moving into the house than were previously occupying the house, improper maintenance, heavy usage, leaking plumbing fixtures, groundwater infiltration, tree roots, freezing conditions, surface drainage problems, poor initial design, poor construction practices, or unsuitable materials used in constructing the system; the system can also simply stop working because of its age. An SSTS that has been properly designed and installed, properly maintained, and used in the manner for which the system was designed can be expected to provide service for twenty to twenty-five years on average. Some parts of the SSTS such as alarms, switches, pumps, filters, etc. will most likely have to be repaired or replaced over the lifetime of the system.
- 5. A Compliance Inspection is not meant to be a test or inspection for longevity of the system; a Compliance Inspection is strictly for the purpose of determining if the SSTS is protective of public health and safety, as well as the groundwater at the date and time the inspection was performed. This inspection is not intended to determine if the SSTS was originally designed or installed to past or present MPCA or other Local Government Unit code requirements. This inspection is not intended to determine if the SSTS was designed and/or installed to support the anticipated flow from the building as the use of the building may have changed since the design and construction of the SSTS due to the addition of bedrooms, occupants, etc. In addition, this inspection is not intended to determine the quality of the original SSTS design, the quality of the construction practices used while installing the SSTS, or the quality of the materials used in constructing the SSTS.
- 6. Brian L. Humpal, Inc. cannot guarantee the performance of SSTS products/components such as: gravelless pipe, chamber trenches, effluent filters, tanks, sewage pre-treatment components, piping, etc. Products such as gravelless pipe are no longer approved for installation in the State of Minnesota and may have a significantly reduced performance and/or life expectancy.
- 7. WINTER WORK: By accepting this report, it is understood that inspections conducted during winter months (approximately November 1st through April 1st) are more difficult to perform because of possible snow cover and/or ground frost. SSTS components such as tanks, maintenance covers, tank inspection pipes, subsurface distribution medium inspection pipes, and soil treatment areas are more difficult or impossible to locate due to snow cover and/or ground frost. In addition, soil borings are more difficult to perform due to snow cover and/or ground frost. Brian L. Humpal, Inc. will attempt to use the same level of standards when performing work during winter periods as when performing work during non-winter periods. However, the recipient of this report understands that because of the aforementioned considerations, the same level of standards may not be possible.
- 8. By accepting this report, the client understands that Brian L. Humpal, Inc. will not be responsible for any monetary damages exceeding the fee for the services provided.
