

Compliance Inspection Form

Existing Subsurface Sewage Treatment Systems (SSTS)

Doc Type: Compliance and Enforcement

520 Lafayette Road North St. Paul, MN 55155-4194

Inspection results based on Minnesota Pollution Control Agency (MPCA) requirements and attached forms – additional local requirements may also apply.	For local tracking purposes:
Submit completed form to Local Unit of Government (LUG) and system owner within 15 days	
System Status	
System status on date (mm/dd/yyyy): 7/16/2019	
	pliant – Notice of Noncompliance de Requirements on page 3.)
Reason(s) for noncompliance (check all applicable)	
☐ Impact on Public Health (Compliance Component #1) – Imminent threat	to public health and safety
☐ Other Compliance Conditions (Compliance Component #3) – Imminent to	hreat to public health and safety
☐ Tank Integrity (Compliance Component #2) – Failing to protect groundwa	
Other Compliance Conditions (Compliance Component #3) – Failing to p	-
 ☐ Soil Separation (Compliance Component #4) – Failing to protect grounds ☐ Operating permit/monitoring plan requirements (Compliance Component 	
Operating permitmonitoring plan requirements (Compliance Component	#5) – Noncompliant

Wellhead Protection Areas, or those used in connection with food, beverage, and lodging establishments as defined in law.

discontinued within ten months of receipt of this notice or within a shorter period if required by local ordinance. If the system is failing to protect ground water, the system must be upgraded, replaced, or its use discontinued within the time required by local ordinance. If an existing system is not failing as defined in law, and has at least two feet of design soil separation, then the system need not be upgraded, repaired, replaced, or its use discontinued, notwithstanding any local ordinance that is more strict. This provision does not apply to systems in shoreland areas,

Compliance Inspection Attachment for Existing Individual Sewage Treatment Systems

Address	210 Indian Trail	
---------	------------------	--

Boring #1 Elevation:	Boring #2 Elevation:	' Boring #3 Elevation:

Comments: Benchmark = Top of septic tank. Assumed elevation = 100'0. SB#1 indicated no redoximorphic mottling at 78", the system does meet the required 24" vertical separation distance from seasonally saturated soils. The system consists of a 1500-gallon septic tank and approximately 1000 sq. ft. of gravity drainfield trenches. The tanks were recently pumped in February of this year, the baffles are ok. Soil borings taken over the drainfield indicated no sign of excess ponding or saturation that would indicate hydraulic failure. This inspection is not a warranty or guarantee, either written or implied, of future or long-term hydraulic functionality/performance, but rather a determination if the systems use is/may cause pollution and/or adverse harm to the environment, groundwater or public health and safety at the time of this inspection. No guarantee can be made on future hydraulic performance, or the performance of system components. Changes in use can cause any system, failing or compliant, to become hydraulically overloaded and ultimately fail. Owner/buyer assumes full responsibility for the long-term performance of this system as well as any future upgrade, repairs or replacement costs. Liability is limited to the cost of this inspection.
