

ZIERKE SOIL TESTING

Tara Ryan
22870 Imperial Ave N
Forest Lake, MN 55025

9/10/2019

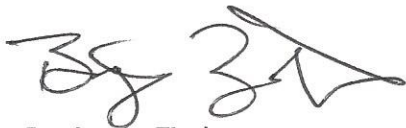

Dear Tara Ryan,

At your request, I have conducted a septic inspection to determine the compliance status of your system pursuant to Minnesota Rules Chapter 7080.1500.

The compliance test set out in 7080.1500 has three main inquiries: 1). Is the system functioning hydraulically (disposing of effluent in a manner that prevents it from coming in contact with people)? 2). Are the septic tanks water tight? 3). Does the system have sufficient vertical separation between the bottom of the septic system and restrictive layers (bedrock, standing water, seasonally wet layers, etc) to provide full treatment of effluent?

Based off of these criteria, your system is compliant. A certification of compliance is in effect for three years from the date it is issued. To be clear, this should not be construed as a guarantee of future system function – there are too many factors that influence the lifespan of a septic system for an inspector to predict or even guess how long a septic system will last. A copy of this report will be filed with your local unit of government for their records.

Sincerely,

Benjamin Zierke
MPCA Lic 119, Cert 9594

Minnesota Pollution Control Agency

520 Lafayette Road North
St. Paul, MN 55155-4194

Compliance Inspection Form
Existing Subsurface Sewage Treatment Systems (SSTS)

Doc Type: Compliance and Enforcement

Inspection results based on Minnesota Pollution Control Agency (MPCA) requirements and attached forms – additional local requirements may also apply.

Submit completed form to Local Unit of Government (LUG) and system owner within 15 days

For local tracking purposes:

System Status

System status on date (mm/dd/yyyy): 9/10/2019

[X] Compliant – Certificate of Compliance
(Valid for 3 years from report date, unless shorter time frame outlined in Local Ordinance.)

[] Noncompliant – Notice of Noncompliance
(See Upgrade Requirements on page 3.)

Reason(s) for noncompliance (check all applicable)

- [] Impact on Public Health (Compliance Component #1) – Imminent threat to public health and safety
[] Other Compliance Conditions (Compliance Component #3) – Imminent threat to public health and safety
[] Tank Integrity (Compliance Component #2) – Failing to protect groundwater
[] Other Compliance Conditions (Compliance Component #3) – Failing to protect groundwater
[] Soil Separation (Compliance Component #4) – Failing to protect groundwater
[] Operating permit/monitoring plan requirements (Compliance Component #5) – Noncompliant

Property Information

Local regulatory authority: Washington County

Regulatory authority phone: 651-430-6655

Brief system description: Two 1000 gallon septic tanks, 1000 gallon lift station, mound dispersal system

Comments or recommendations:

System passed inspection March 2011.

Certification

I hereby certify that all the necessary information has been gathered to determine the compliance status of this system. No determination of future system performance has been nor can be made due to unknown conditions during system construction, possible abuse of the system, inadequate maintenance, or future water usage.

Necessary or Locally Required Attachments

- [X] Soil boring logs [] System/As-built drawing [] Forms per local ordinance
[X] Other information (list): Previous Soil Observations

1. Impact on Public Health – Compliance component #1 of 5

Compliance criteria:

System discharges sewage to the ground surface.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
System discharges sewage to drain tile or surface waters.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
System causes sewage backup into dwelling or establishment.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

Any “yes” answer above indicates the system is an imminent threat to public health and safety.

Comments/Explanation:

Tara did not report any issues with the system. No signs of ponding or leakage during site visit 9/6/2019.

Verification method(s):

- Searched for surface outlet
- Searched for seeping in yard/backup in home
- Excessive ponding in soil system/D-boxes
- Homeowner testimony (See Comments/Explanation)
- “Black soil” above soil dispersal system
- System requires “emergency” pumping
- Performed dye test
- Unable to verify (See Comments/Explanation)
- Other methods not listed (See Comments/Explanation)

2. Tank Integrity – Compliance component #2 of 5

Compliance criteria:

System consists of a seepage pit, cesspool, drywell, or leaching pit. <i>Seepage pits meeting 7080.2550 may be compliant if allowed in local ordinance.</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Sewage tank(s) leak below their designed operating depth. If yes, which sewage tank(s) leaks:	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

Any “yes” answer above indicates the system is failing to protect groundwater.

Comments/Explanation:

Present for pumping by Olson's Sewer 9/6/2019. Tanks in good condition, baffles in place.

Verification method(s):

- Probed tank(s) bottom
- Examined construction records
- Examined Tank Integrity Form (Attach)
- Observed liquid level below operating depth
- Examined empty (pumped) tanks(s)
- Probed outside tank(s) for “black soil”
- Unable to verify (See Comments/Explanation)
- Other methods not listed (See Comments/Explanation)

3. Other Compliance Conditions – Compliance component #3 of 5

- a. Maintenance hole covers are damaged, cracked, unsecured, or appear to be structurally unsound. Yes* No Unknown
- b. Other issues (electrical hazards, etc.) to immediately and adversely impact public health or safety. Yes* No Unknown
***System is an imminent threat to public health and safety.**

Explain:

- c. System is non-protective of ground water for other conditions as determined by inspector. Yes* No
***System is failing to protect groundwater.**

Explain:

4. Soil Separation – Compliance component #4 of 5

Date of installation: 2001 Unknown
(mm/dd/yyyy)

Shoreland/Wellhead protection/Food beverage lodging? Yes No

Compliance criteria:

For systems built prior to April 1, 1996, and not located in Shoreland or Wellhead Protection Area or not serving a food, beverage or lodging establishment: Yes No

Drainfield has at least a two-foot vertical separation distance from periodically saturated soil or bedrock.

Non-performance systems built April 1, 1996, or later or for non-performance systems located in Shoreland or Wellhead Protection Areas or serving a food, beverage, or lodging establishment: Yes No

Drainfield has a three-foot vertical separation distance from periodically saturated soil or bedrock.*

“Experimental”, “Other”, or “Performance” systems built under pre-2008 Rules; Type IV or V systems built under 2008 Rules (7080.2350 or 7080.2400 (Advanced Inspector License required) Yes No

Drainfield meets the designed vertical separation distance from periodically saturated soil or bedrock.

Verification method(s):

Soil observation does not expire. Previous soil observations by two independent parties are sufficient, unless site conditions have been altered or local requirements differ.

- Conducted soil observation(s) (Attach boring logs)
- Two previous verifications (Attach boring logs)
- Not applicable (Holding tank(s), no drainfield)
- Unable to verify (See Comments/Explanation)
- Other (See Comments/Explanation)

Comments/Explanation:

Indicate depths or elevations

A. Bottom of distribution media	101.5'
B. Periodically saturated soil/bedrock	98.5'
C. System separation	3.0'
D. Required compliance separation*	3.0'

*May be reduced up to 15 percent if allowed by Local Ordinance.

Any “no” answer above indicates the system is failing to protect groundwater.

5. Operating Permit and Nitrogen BMP* – Compliance component #5 of 5 Not applicable

Is the system operated under an Operating Permit? Yes No **If “yes”, A below is required**

Is the system required to employ a Nitrogen BMP? Yes No **If “yes”, B below is required**

BMP = Best Management Practice(s) specified in the system design

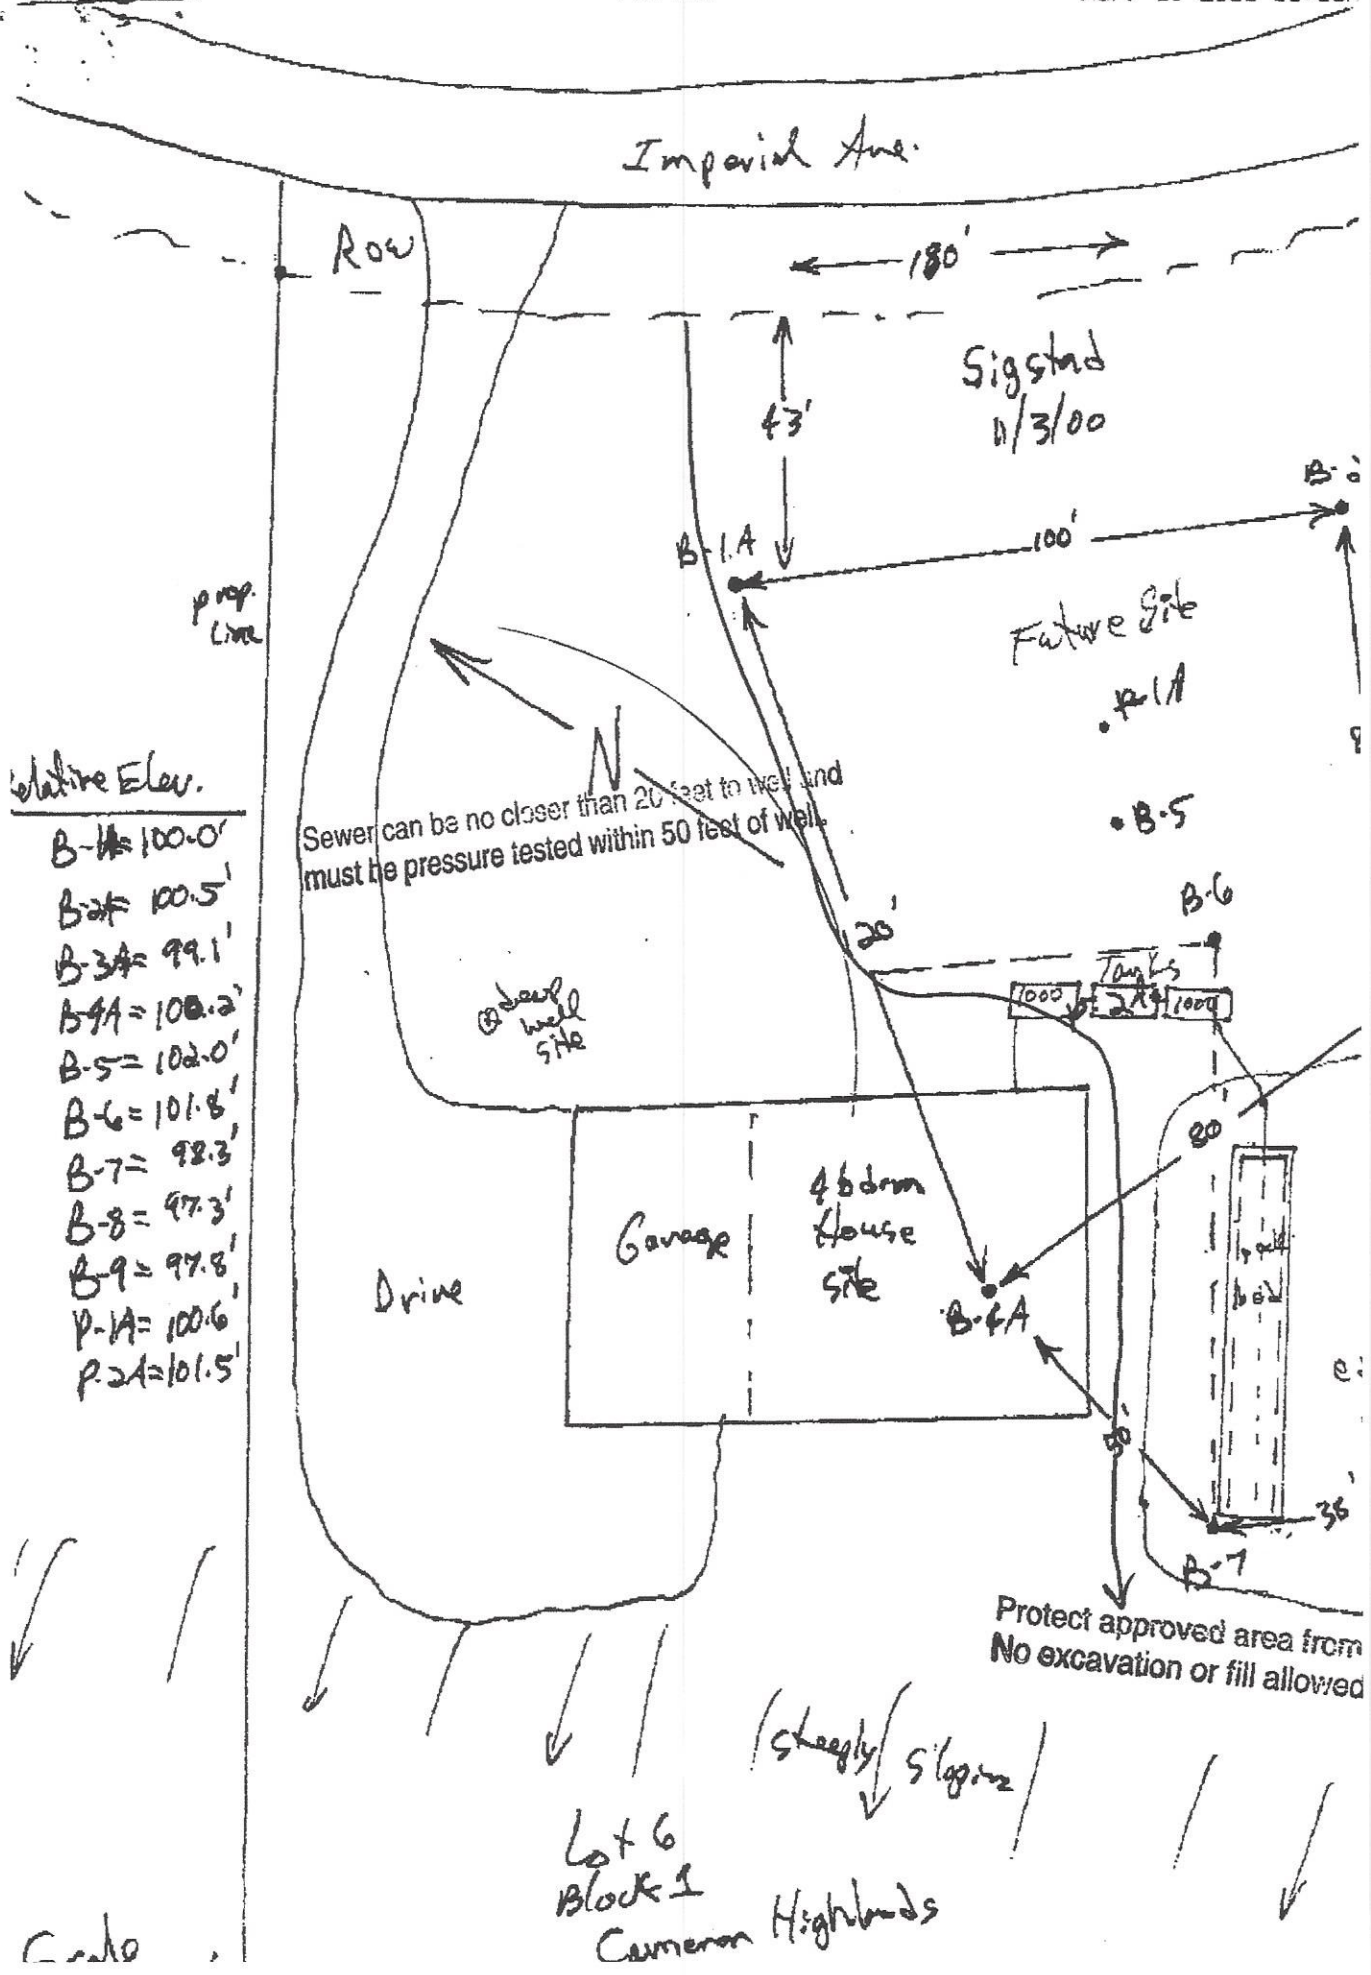

If the answer to both questions is “no”, this section does not need to be completed.

Compliance criteria

- a. Operating Permit number: _____ Yes No
Have the Operating Permit requirements been met?
- b. Is the required nitrogen BMP in place and properly functioning? Yes No

Any “no” answer indicates Noncompliance.

Upgrade Requirements (Minn. Stat. § 115.55) An imminent threat to public health and safety (ITPHS) must be upgraded, replaced, or its use discontinued within ten months of receipt of this notice or within a shorter period if required by local ordinance. If the system is failing to protect ground water, the system must be upgraded, replaced, or its use discontinued within the time required by local ordinance. If an existing system is not failing as defined in law, and has at least two feet of design soil separation, then the system need not be upgraded, repaired, replaced, or its use discontinued, notwithstanding any local ordinance that is more strict. This provision does not apply to systems in shoreland areas, Wellhead Protection Areas, or those used in connection with food, beverage, and lodging establishments as defined in law.

Relative Elev.

B-1A	100.0'
B-2A	100.5'
B-3A	99.1'
B-4A	100.2'
B-5	102.0'
B-6	101.6'
B-7	98.3'
B-8	97.3'
B-9	97.8'
P-1A	100.6'
P-2A	101.5'

Sewer can be no closer than 20 feet to well and must be pressure tested within 50 feet of well.

Protect approved area from No excavation or fill allowed

LOGS OF SOIL BORINGS

Location of Project Sigstad prop., Lot 6, Block 1, Cameron Highlands, Sec. 10, Forest Lake Twp., Wash. Co.

Borings Made by Chris Zierke

Date: 11/3/00

Hand bucket auger used for borings: USDA - SCS Soil Classification used.

Depth, In Feet	Boring Number 46
0	
0-6"	Dark-brown sandy loam(10YR-3/3)
6-12"	Dark yellowish-brown loam(10YR-4/4)
12-30"	Dark yellowish-brown clay loam(10YR-4/6), iron-stains & light-gray mottles below 20"

End of boring at 2.5 feet.

Standing water table:

Present at _____ feet of depth, _____ hours after boring.

Standing water not present in hole .

Mottled Soil:

Observed at 20" feet of depth.

Mottled soil not present in bore hole .

Comments:

Depth, In Feet	Boring Number 47
0	
0-10"	Dark-brown sandy loam(3/3)
10-20"	Dark y-brown loam(4/4)
20-30"	Dark y-brown clay loam(4/6), iron-st., light-gray mottles

End of boring at 2.5 feet.

Standing water table:

Present at _____ feet of depth, _____ hours after boring.

Standing water not present in hole .

Mottled Soil:

Observed at 20" feet of depth.

Mottled soil not present in bore hole .

Comments:

Depth, In Feet	Boring Number 48
0	
0-8"	Dark-brown sandy loam(3/3)
8-20"	Dark y-brown loam(4/4)
20-30"	Dark y-brown clay loam(4/6), iron-st., light-gray mottles

End of boring at 2.5 feet.

Standing water table:

Present at _____ feet of depth, _____ hours after boring.

Standing water not present in hole .

Mottled Soil:

Observed at 20" feet of depth.

Mottled soil not present in bore hole .

Comments:

Depth, In Feet	Boring Number 49
0	
0-8"	Dark-brown sandy loam(3/3)
8-18"	Dark y-brown loam(4/4)
18-24"	Dark y-brown clay loam(4/6), iron-st., light-gray mottles

End of boring at 2 feet.

Standing water table:

Present at _____ feet of depth, _____ hours after boring.

Standing water not present in hole .

Mottled Soil:

Observed at 1.5 feet of depth.

Mottled soil not present in bore hole .
