1 - 1250 GALLON SEPTIC TANK, 1 - 1000 GALLON LIFT TANK AND PRESSURE FED GRAVITY Brief system description: TRENCHES.

#### Comments or recommendations:

Other information (list):

SYSTEM FOUND TO BE IN GOOD SHAPE AND WORKING AS IT SHOULD.

#### Certification

(mm/dd/yyyy)

#### 1. Impact on Public Health - Compliance component #1 of 5

Compliance criteria:		Verification method(s):
System discharges sewage to the	🗌 Yes 🖾 No	Searched for surface outlet
ground surface.		Searched for seeping in yard/backup in home
System discharges sewage to drain	🗌 Yes 🖾 No	Excessive ponding in soil system/D-boxes
tile or surface waters.		Homeowner testimony (See Comments/Explanation)
System causes sewage backup into	🗌 Yes 🖾 No	"Black soil" above soil dispersal system
dwelling or establishment.		System requires "emergency" pumping
Any "yes" answer above indicates the system is an imminent threat to public health and safety.		Performed dye test
		Unable to verify (See Comments/Explanation)
		Other methods not listed (See Comments/Explanation)

#### **Comments/Explanation:**

#### 2. Tank Integrity – Compliance component #2 of 5

Compliance criteria:		Verification method(s):
System consists of a seepage pit,	🗌 Yes 🖾 No	Probed tank(s) bottom
cesspool, drywell, or leaching pit.		Examined construction records
Seepage pits meeting 7080.2550 may be compliant if allowed in local ordinance.		Examined Tank Integrity Form (Attach)
<b>I</b>	□ Yes 🛛 No	Observed liquid level below operating depth
Sewage tank(s) leak below their designed operating depth.		Examined empty (pumped) tanks(s)
If yes, which sewage tank(s) leaks:		Probed outside tank(s) for "black soil"
Any "yes" answer above indicates the system is failing to protect groundwater.		Unable to verify (See Comments/Explanation)
		Other methods not listed (See Comments/Explanation)
Comments/Explanation:		

TANKS PUMPED AND INSPECTED.

#### 3. Other Compliance Conditions – Compliance component #3 of 5

- a. Maintenance hole covers are damaged, cracked, unsecured, or appear to be structurally unsound. 🗆 Yes\* 🛛 No 🗋 Unknown
- b. Other issues (electrical hazards, etc.) to immediately and adversely impact public health or safety. \*System is an imminent threat to public health and safety.

Explain:

c. System is non-protective of ground water for other conditions as determined by inspector . Yes\* No \*System is failing to protect groundwater.

Explain:

#### 4. Soil Separation – Compliance component #4 of 5

Date of installation: 7/27/1992		Verification method(s):	
(mm/dd/yyyy) Shoreland/Wellhead protection/Food beverage lodging?	🗌 Yes 🖾 No	Soil observation does not expire. Pre observations by two independent pa unless site conditions have been alte	rties are sufficient,
Compliance criteria:		requirements differ.	
For systems built prior to April 1, 1996, and	🗌 Yes 🔲 No	Conducted soil observation(s) (At	tach boring logs)
not located in Shoreland or Wellhead Protection Area or not serving a food.		Two previous verifications (Attach	boring logs)
beverage or lodging establishment:		Not applicable (Holding tank(s), no	drainfield)
Drainfield has at least a two-foot vertical		Unable to verify (See Comments/Ex	(planation)
separation distance from periodically saturated soil or bedrock.		Other (See Comments/Explanation)	
Non-performance systems built April 1,	🛛 Yes 🔲 No	Comments/Explanation:	
1996, or later or for non-performance systems located in Shoreland or Wellhead Protection Areas or serving a food, beverage, or lodging establishment:		BORING INFO ATTACHED	
Drainfield has a three-foot vertical separation distance from periodically saturated soil or bedrock.*			
"Experimental", "Other", or "Performance"	🗌 Yes 🔲 No	Indicate depths or elevations	
systems built under pre-2008 Rules; Type IV or V systems built under 2008 Rules (7080. 2350 or 7080.2400 (Advanced Inspector License required)		A. Bottom of distribution media	98'6"
		B. Periodically saturated soil/bedrock	95'0"
Drainfield meets the designed vertical		C. System separation	42"
separation distance from periodically saturated soil or bedrock.		D. Required compliance separation*	36"
Any "no" answer above indicates ta failing to protect groundwater.	he system is	*May be reduced up to 15 percent if Ordinance.	allowed by Local

### 5. Operating Permit and Nitrogen BMP\* – Compliance component #5 of 5 X Not applicable

Is the system operated under an Operating Permit?	🗌 Yes 🖾 No	If "yes", A below is required
Is the system required to employ a Nitrogen BMP?	🗌 Yes 🖾 No	If "yes", B below is required
BMP = Best Management Practice(s) specified in the system design		

#### If the answer to both questions is "no", this section does not need to be completed.

#### **Compliance criteria**

a.	Operating Permit number:	☐ Yes ☐ No
	Have the Operating Permit requirements been met?	
b.	Is the required nitrogen BMP in place and properly functioning?	🗌 Yes 🔲 No

#### Any "no" answer indicates Noncompliance.

**Upgrade Requirements** (Minn. Stat. § 115.55) An imminent threat to public health and safety (ITPHS) must be upgraded, replaced, or its use discontinued within ten months of receipt of this notice or within a shorter period if required by local ordinance. If the system is failing to protect ground water, the system must be upgraded, replaced, or its use discontinued within the time required by local ordinance. If an existing system is not failing as defined in law, and has at least two feet of design soil separation, then the system need not be upgraded, replaced, or its use discontinued, notwithstanding any local ordinance that is more strict. This provision does not apply to systems in shoreland areas, Wellhead Protection Areas, or those used in connection with food, beverage, and lodging establishments as defined in law.

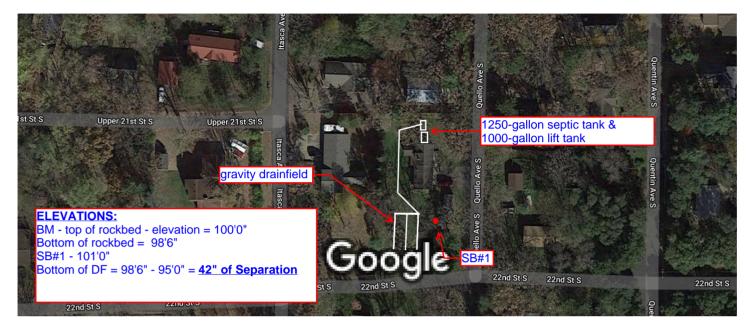

#### Address: 2170 QUELLO AVE S LAKELAND MN

Boring #1 Elevation: 101'0"	Bottom of Distribution Media: 98'6"
0-14 10YR 3/3 Fine Sand -30 10YR 4/4 Granular Sand w/ 1/4" Rock -42 10YR 4/6 Granular Sand -72 10YR 5/4 Granular Sand (95'0")	

#### Sketch:

**Comments:** Soil boring #1 indicated no redoximorphic to a depth of 72". The system meets the required vertical separation distance from seasonally saturated soils being there is 42" of Separation from drainfield to saturated soils with only 36" required. The system consists 1 – 1250 Gallon Septic Tank, 1 – 1000 Gallon Lift Tank and Pressure Fed Gravity Trenches. This inspection is not a warranty or guarantee, either written or implied, of future or long-term hydraulic functionality/performance, but rather a determination if the systems use is/may cause pollution and/or adverse harm to the environment, groundwater or public health and safety at the time of this inspection. No guarantee can be made on future hydraulic performance, or the performance of system components. Changes in use can cause any system, failing or compliant, to become hydraulically overloaded and ultimately fail. Owner/buyer assumes full responsibility for the long-term performance of this system as well as any future upgrade, repairs or replacement costs. Liability is limited to the cost of this inspection.
