## Compliance inspection report form

## **Existing Subsurface Sewage Treatment System (SSTS)**

Doc Type: Compliance and Enforcement

**Instructions:** Inspector must submit completed form to Local Governmental Unit (LGU) and system owner within 15 days of final determination of compliance or noncompliance. Instructions for filling out this form are located on the Minnesota Pollution Control Agency (MPCA) website at <a href="https://www.pca.state.mn.us/sites/default/files/wg-wwists4-31a.pdf">https://www.pca.state.mn.us/sites/default/files/wg-wwists4-31a.pdf</a>.

Property Information	Local tracking	number:

Drainfield meets the designed vertical separation distance from periodically saturated soil or bedrock.			

34" vertical separation distance OK as per the 15% reduction allowed in Subsurface Sewage Treatment Regulations Section 4.3 (4) which is attached to this report.

**Upgrade requirements:** (Minn. Stat. § 115.55) An imminent threat to public health and safety (ITPHS) must be upgraded, replaced, or its use discontinued within ten months of receipt of this notice or within a shorter period if required by local ordinance. If the system is failing to protect ground water, the system must be upgraded, replaced, or its use discontinued within the time required by local ordinance. If an existing system is not failing as defined in law, and has at least two feet of design soil separation, then the system need not be upgraded, repaired, replaced, or its use discontinued, notwithstanding any local ordinance that is more strict. This provision does not apply to systems in shoreland areas, Wellhead Protection Areas, or those used in connection with food, beverage, and lodging establishments as defined in law.

### 4.1 Treatment required.

Sewage discharged from a dwelling, group of dwellings, or other establishment that is not served by a system issued an operating permit containing effluent and discharge limits or specific monitoring requirements must be treated according to applicable requirements.

## 4.2 Compliance criteria for new construction.

An SSTS regulated under a current permit is considered compliant if it meets the applicable requirements of Section 16 to Section 21.

## 4.3 Compliance criteria for existing systems.

To be in compliance, an existing SSTS must meet the provisions of this subpart.

- The SSTS must be protective of public health and safety. A system that is not protective is considered an imminent threat to public health or safety. At a minimum, a system that is an imminent threat to public health or safety is a system which discharges sewage or sewage effluent to the ground surface, drainage systems, ditches, or storm water drains or directly to surface water; systems that cause a reoccurring sewage backup into a dwelling or other establishment; systems which pose electrical hazards; systems which have sewage tanks that are unsecured, damaged, or with weak maintenance hole covers. A determination of protectiveness for other conditions must be made by a qualified employee of the Department or licensed inspection business.
- (2) The SSTS must be protective of groundwater. A system that is not protective is considered a system failing to protect groundwater. At a minimum, a system that is failing to protect groundwater is a system that is a cesspool; a system with less than the required vertical separation distance described in Section 4.3 (4) and Section 4.3 (5) of this Section; and a system not abandoned in accordance with Section 24. A determination of the threat to groundwater quality for this and other conditions must be made by a qualified employee of the Department or licensed inspection business.
- (3) The SSTS must meet performance standards and be managed and operated according to its operating permit.
- (4) SSTS built after March 31, 1996, or in an SWF area as defined in Section 2.2 (122), shall have a three (3) foot vertical separation. No more than a fifteen (15) percent reduction in the vertical separation
  - distance is allowed to account for settling of sand or soil, normal variation of measurements, and interpretations of the limiting layer conditions.
- (5) SSTS built before April 1, 1996, in areas that are not SWF areas as defined in Section 2.2 (122), must have at least two (2) feet of vertical separation.
- (6) The vertical separation measurement for Section 4.3 (4) and Section 4.3 (5) shall be measured outside of the area of system influence in an area of similar soil and on the same contour elevation.
- (7) An existing SSTS which is found to be an imminent threat to public health and safety by a qualified employees of the Department, or a licensed inspection business, is hereby declared to be a public health nuisance and shall be abated within ten (10) days from the date the Owner is given notice. The system shall be repaired, upgraded, replaced or its use discontinued within ninety (90) days from the date the

Compliance criteria for existing systems.

A system that discharges untreated sewage to the ground surface, ditches, storm water drains or surface water is considered to be an imminent threat to public health and safety.

A system that is not protective of groundwater is considered to be failing to protect groundwater.
