

Compliance inspection report form

Existing Subsurface Sewage Treatment System (SSTS)

520 Lafayette Road North St. Paul, MN 55155-4194 Doc Type: Compliance and Enforcement

Instructions: Inspection results based on Minnesota Pollution Control Agency (MPCA) requirements and attached supporting documentation - additional local requirements may also apply. Further information can be found here: https://www.pca.state.mn.us/sites/default/files/wq-wwists4-31a.pdf.

Inspector must submit completed form to Local Governmental Unit (LGU) and system owner within 15 days of final determination of compliance or noncompliance.

Property information	Local tracking number:
Parcel ID# or Sec/Twp/Range: 2803021210004 Loca	I regulatory authority: Washington county
Property address: 8495 80TH ST N	
Owner/representative: : BOSACKER ANNA L	Owner's phone:
Brief system description: SEPTIC TANK, LIFT TANK AND MOUND), ORIGINAL FROM 2013
System status	
System status on date (mm/dd/yyyy): _5/13/2022	
☐ Compliant – Certificate of compliance*	Noncompliant - Notice of noncompliance
(Valid for 3 years from report date unless evidence of an imminent threat to public health or safety requiring removal and abatement under section 145A.04, subdivision 8 is discovered or a shorter time frame exists in Local Ordinance.)	An imminent threat to public health and safety (ITPHS) must be upgraded, replaced, or its use discontinued within ten months of receipt of this notice or within a shorter period if required by local ordinance or under section 145A.04 subdivision 8.
*Note: Compliance indicates conformance with Minn. R. 7080.1500 as of system status date above and does not guarantee future performance.	Systems failing to protect ground water must be upgraded, replaced, or use discontinued within the time required by local ordinance.
Reason(s) for noncompliance (check all applicable	
☐ Impact on public health (Compliance component #1) –	Imminent threat to public health and safety
☐ Tank integrity (Compliance component #2) – Failing to	protect groundwater
☐ Other Compliance Conditions (Compliance component	#3) – Imminent threat to public health and safety
☐ Other Compliance Conditions (Compliance component	#3) – Failing to protect groundwater
System not abandoned according to Minn. R. 7080.250	00 (Compliance component #3) - Failing to protect groundwater
☐ Soil separation (Compliance component #5) – Failing to	o protect groundwater
☐ Operating permit/monitoring plan requirements (Compl	iance component #4) – Noncompliant - local ordinance applies
Comments or recommendations	
Certification	
I hereby certify that all the necessary information has been gathered determination of future system performance has been nor can be mabuse of the system, inadequate maintenance, or future water usage	ade due to unknown conditions during system construction, possible
By typing my name below, I certify the above statements to be true can be used for the purpose of processing, this form.	e and correct, to the best of my knowledge, and that this information

failing to protect groundwater.

Upgrade requirements: (Minn. Stat. § 115.55) An imminent threat to public health and safety (ITPHS) must be upgraded, replaced, or its use discontinued within ten months of receipt of this notice or within a shorter period if required by local ordinance. If the system is failing to protect ground water, the system must be upgraded, replaced, or its use discontinued within the time required by local ordinance. If an existing system is not failing as defined in law, and has at least two feet of design soil separation, then the system need not be upgraded, repaired, replaced, or its use discontinued, notwithstanding any local ordinance that is more strict. This provision does not apply to systems in shoreland areas, Wellhead Protection Areas, or those used in connection with food, beverage, and lodging establishments as defined in law.

Compliance Inspection Attachment for Existing Individual Sewage Treatment Systems

Address	8495 80 [™] St N, Grant
---------	----------------------------------

Boring #1 Elevation:	Boring #2 Elevation:	Boring #3 Elevation:"
0-13 3/4 10YR bark		
brown sand -55 washed mound sand		
-64 3/4 10YR brown fine sand		
Mottles found at 55"		

Sketch:

See attached

Comments: Benchmark = Top of rock. Assumed elevation = 100'0". Soil borings #1 indicated redoximorphic mottling at 55", this system does meet the required 36" vertical separation from seasonally saturated soils, soils were verified at the time of installation by Washington County. The system consists of 2 1000-gallon septic tanks, a 1000-gallon lift tank and approximately 500sq/ft of drain field with 6" of rockunder the distribution media. The tanks were pumped at the time of this inspection, the baffles are intact and in goodshape and the tanks are sealed and watertight. This system is classified as compliant. This inspection is not a warranty orguarantee, either written or implied, of future or long-term hydraulic functionality/performance, but rather adetermination if the systems use is/may cause pollution and/or adverse harm to the environment, groundwater or publichealth and safety at the time of this inspection. No guarantee can be made on future hydraulic performance, or theperformance of system components (pumps, controls, etc.). Changes in use can cause any system, failing or compliant, to become hydraulically overloaded and ultimately fail. Owner/buyer assumes full responsibility for the long-termperformance of this system as well as any future upgrade, repairs or replacement costs. Liability is limited to the cost of this inspection.
